Re: RD-79, T.O. 9

Dear

25X1

We are attaching hereto a (cost breakdown) and an engineering information memorandum covering a requested increase in funds to complete the work required under T.O. 9, of Contract RD-79.

We would appreciate early approval of this request so that work on the project may continue without interruption. If you require additional information, please call us.

Very truly yours,

25X1

ENGINEERING INFORMATION
TASK ORDER 9, INCREASED FUNDS

A review of the program to prepare an antenna instruction manual reveals an amplification of effort not originally anticipated in the proposal submitted by [] At the commencement of the program, it was thought that fifty pages of instruction material would be required. It has now been found that over one-hundred and fifty pages will be incorporated in the manual.

25X1

The increase in work has been in two general directions. First, it has been found desirable to amplify the number of illustrations to more clearly present the required information on a level readily comprehensible by the user. Second, the background sections have been greatly expanded. This additional information is felt requisite for the users to have a fundamental knowledge to call upon when they meet a particular situation not covered by specific examples in the manual.
